

Twitter

Dana Brunson

Statement of Purpose

Twitter is a text-based social media platform that allows users to create and share posts, and engage with topics and conversations.

I chose this topic because I noticed that the new design and changes made to the app in the past years were disliked by a lot of users and affected their experiences and motivation for using the app.

The changes that I made to the app improve the user's experience by de-centering advertisements, improving the visibility of their actions, and removing unnecessary tabs and pages.

Name Aaron McDonald

Age 26

Occupation Project Manager

Needs

A simple interface with the option to include captions on videos easily for all video content without having to dig to find the feature.

Experiences

His experiences with the app have been overall positive, however with the lack of accessibility features, it is hard to interact with all content.

Behaviors

Aaron uses the app occasionally in quicker sessions to scroll through topics that interest him.

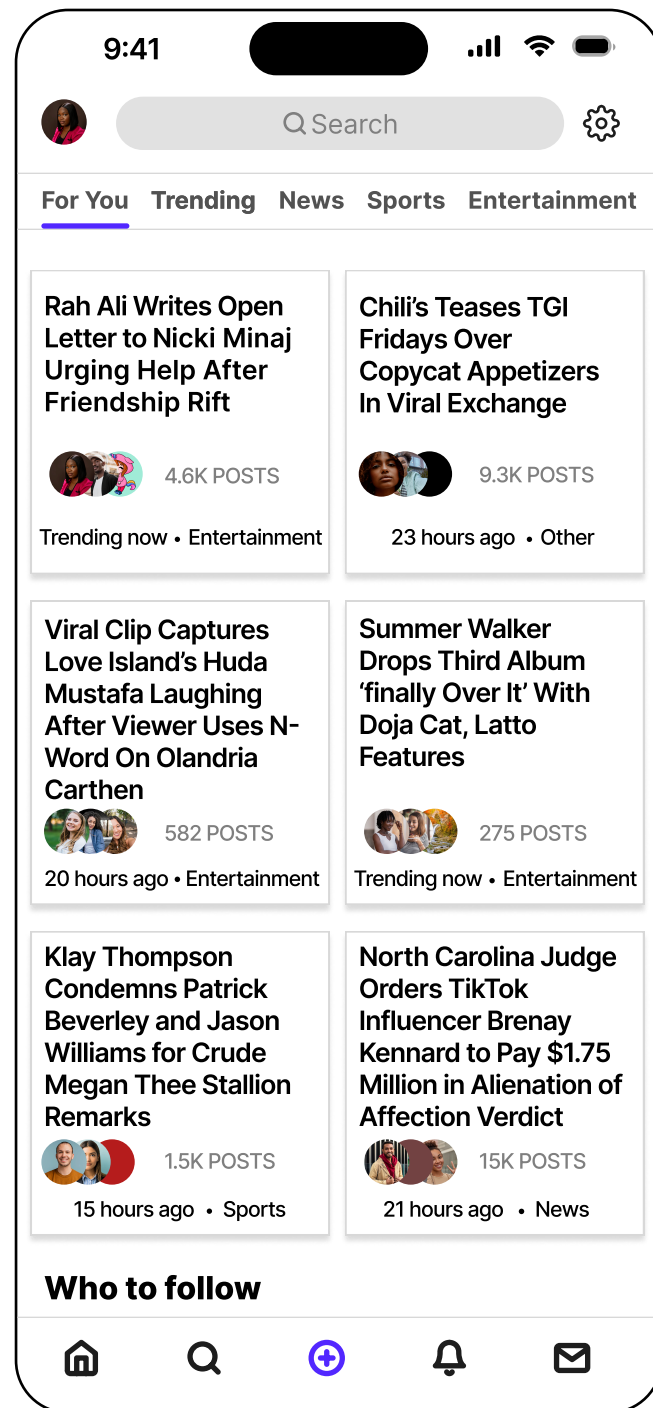

Goals

His goals are to continue to accelerate his career and continue to make an impact at his company.

Accessibility Need

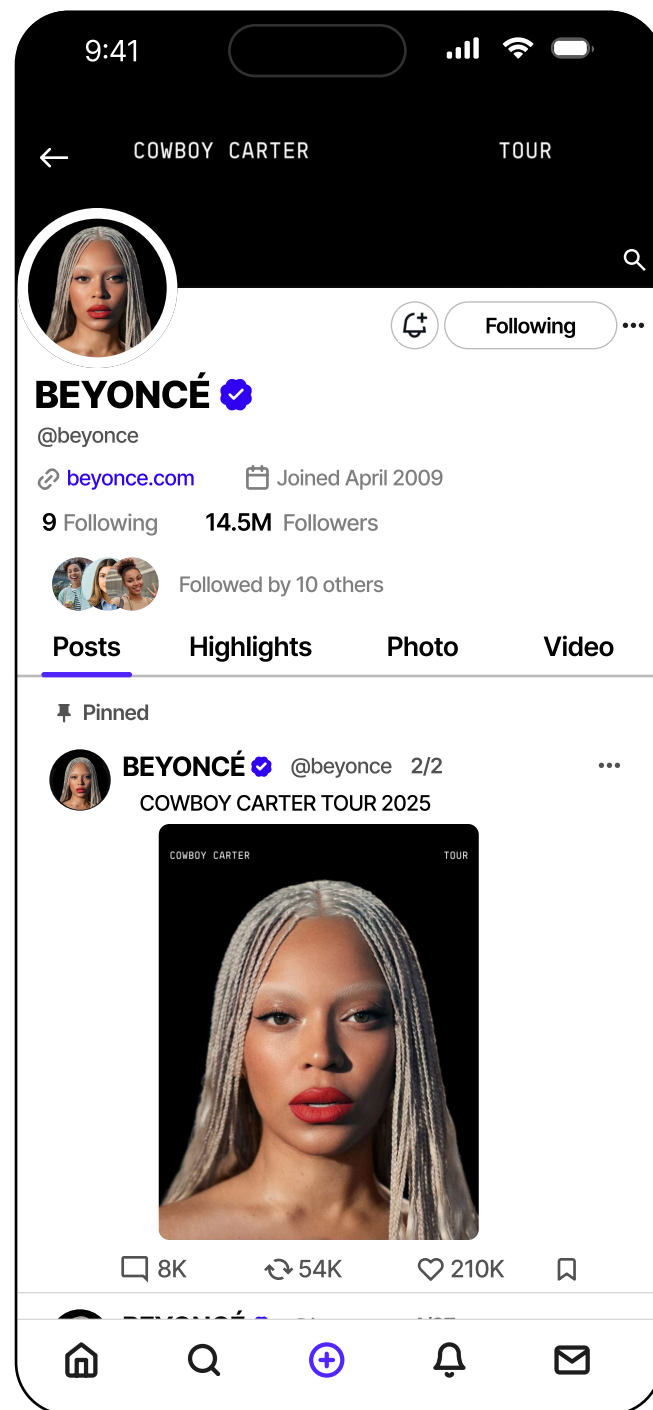

Aaron is hard of hearing, so his needs include generated closed captions on all audio and video content so that he can follow along. In my redesign, I want to include this feature in a way that is easy to find without several layers of navigation.

Search Page

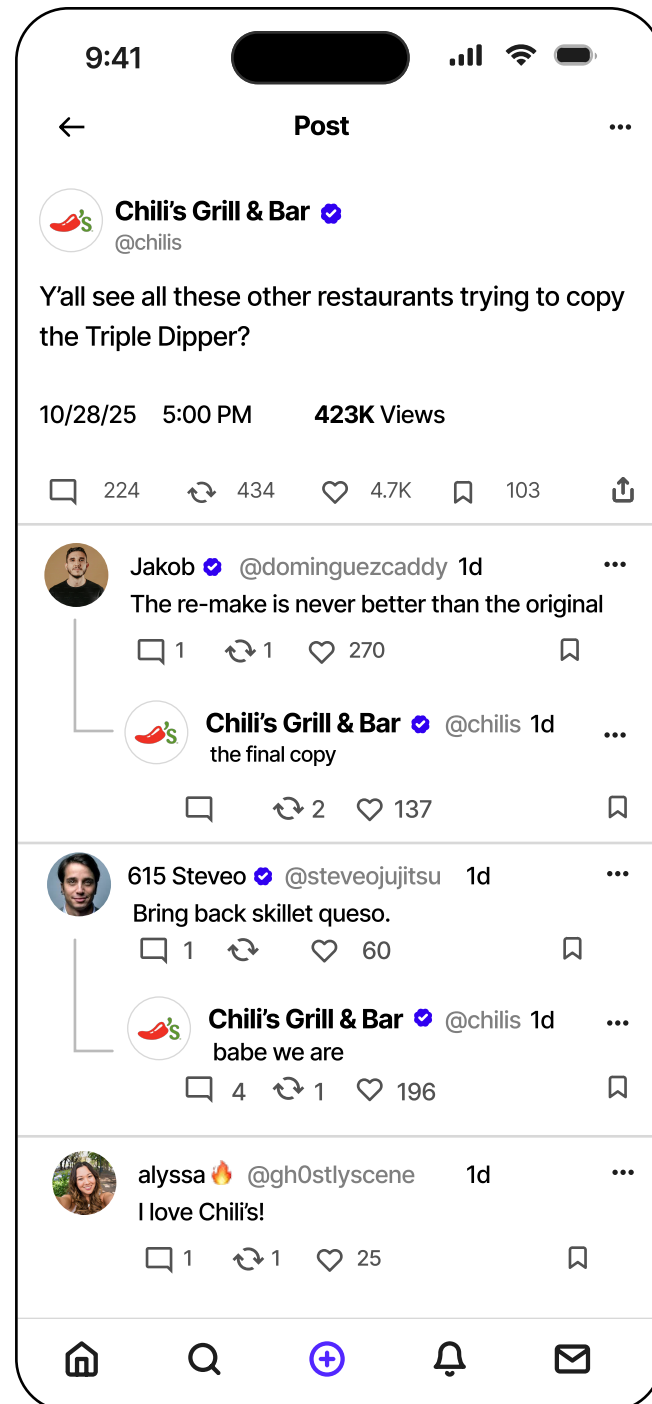

The changes that I made to the search page include removing the large ad space at the top of the screen and placing the news content into a modular grid layout instead of the rows that they were in before. The post button has also been moved to the bottom of the screen as to not overlap the content on the page. The usability principles that applied to this screen are alignment and aesthetic and minimal design.

Profile Page

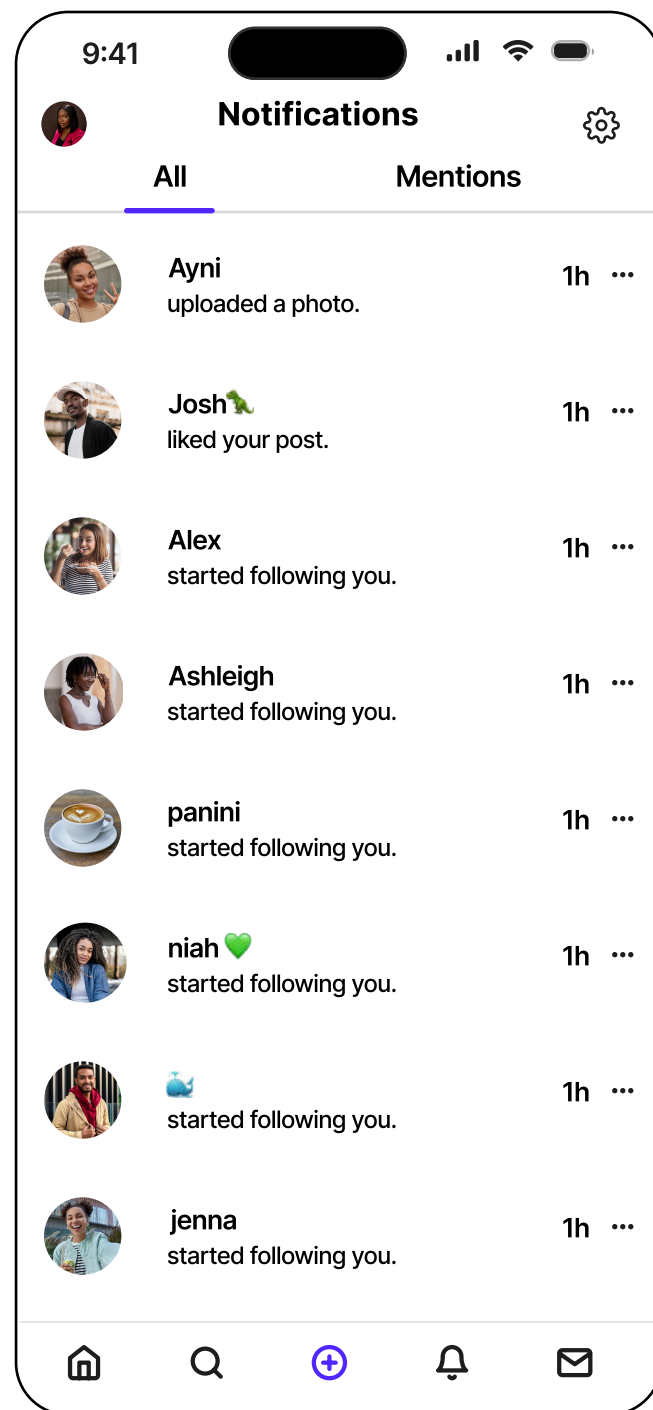

The changes that I made to the profile page were removing the buttons in the header image, making the profile and header images larger, removing the “Replies” section of the profile, and minimizing the page media content thumbnail size. The usability principles applied were proportion and aesthetic and minimalist design. I highlighted the important parts of the profile page and made them larger to show their importance.

Post Page

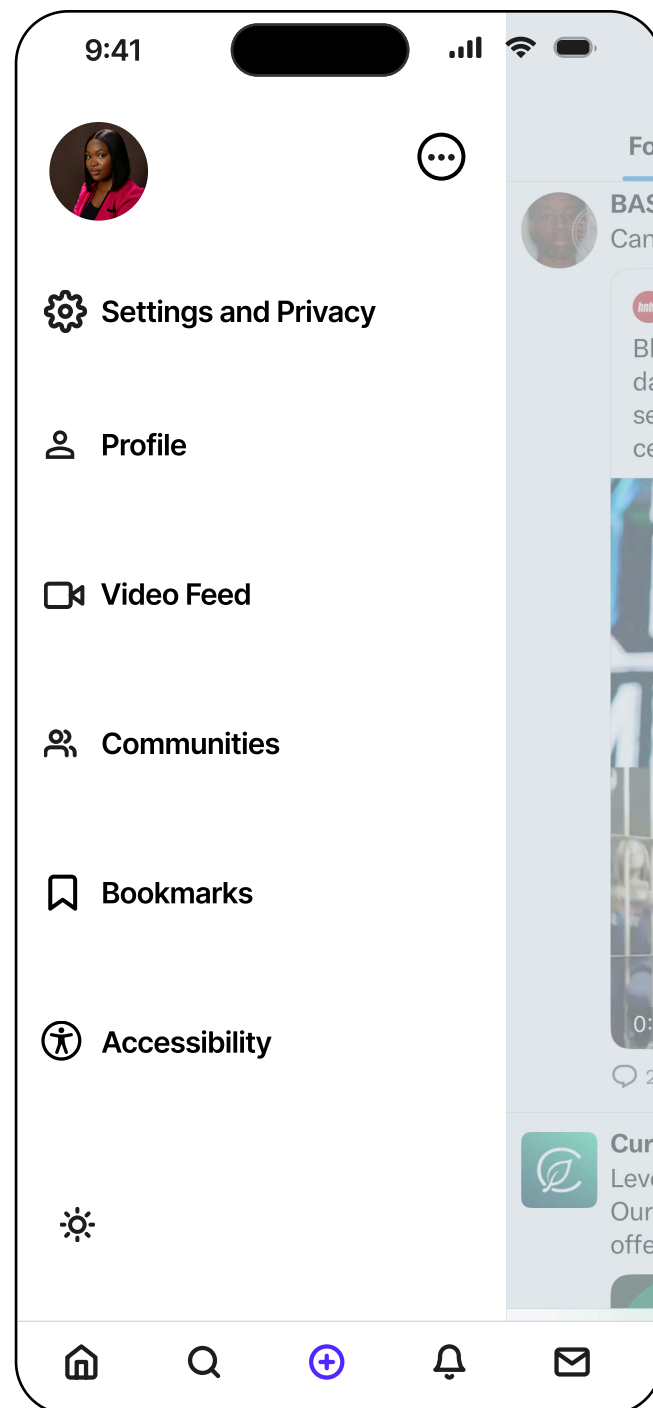

The changes that I made to this page include removing some of the shared metrics with the user, specifically the views option of seeing the amount of views on a post. I also nested the comment reply under the comment to make it clear that the reply is actually a reply. I also removed the Grok AI options under the posts to reduce the amount of icons on the screen. The usability principles I implemented were aesthetics and minimalist design and alignment.

Notification Page

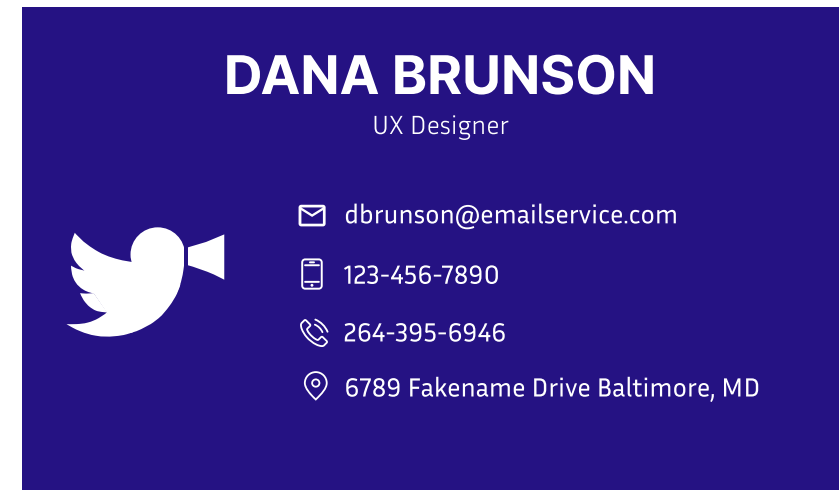

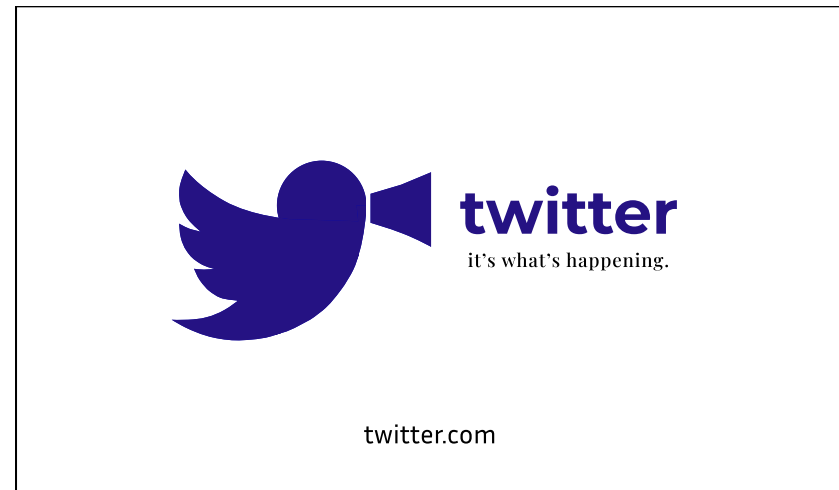

The changes that I made to the notifications screen were changing the types of notifications that are shown on the screen, along with their size on the screen, and removing the verified notifications. I also changed the language of the notifications so that it is clear what the notifications are for. The usability principles applied here are the aesthetics and minimalist design and the match between the system and the real world.

Navigation Screen

The changes I made to the navigation page include removing several pages like the chat, premium, lists, spaces, and monetization. These pages do not cater to most users and are not necessary to the primary functions of the app. I also added the Accessibility page and moved the settings and privacy to the top of the screen. The accessibility settings are hidden within the app, and I felt that it would be easier for users to find. The usability principles applied to this screen are recognition rather than recall and flexibility and efficiency of use.

Typography Decisions

I have established typography hierarchy by making my name on the card the largest typeface, bolded, and the only words that are all capitalized. The rest of the text on the back of the card is written in a much smaller, regular-weighted font and uses lowercase letters. My name on the card is also placed at the very top of the card above the rest of the information and icons, and is centered on the card.
